Fan favourite returns to BMO Studio Theatre as part of a multi-city tour this fall.

SAINT JOHN – The incredible, action-packed production *TILT* is returning to the BMO Studio Theatre on September 24 as part of the SJTC Presentation Series. This run is part of a multi-city tour by Fredericton based Solo Chicken Productions.

In this riveting performance, a couple's life takes an unexpected twist, and it's up to the audiences to decide their fate. The show is an exciting fusion of forms — improv comedy and physical theatre — that have existed independently under the Solo Chicken umbrella until now.

This thrilling balancing act of physical theatre and improv is the result of creators and performers Jean-Michel Cliche (SCP Associate Artistic Director) & Alex Rioux (Director of SCP's *Fruit Machine*) who both have nearly a decade of experience improvising together. Supported by Georgia Priestley Brown's (former Second City stage manager) technical improvisation, including lights, sound and projection, *TILT* is a seemingly impossible show that is executed with grace, polish, and heart.

TILT was originally performed at 2024 Fundy Fringe Festival in Saint John NB, where it won the Fan Favourite Audience Choice Award! Now, *TILT* is hitting the road for performances in Fredericton, Halifax, Sackville and of course right here at the BMO Studio Theatre in Saint John!

Tickets are on sale now and as a bonus, a pre-show improv workshop led by Jean Michel Cliche will also be offered at 6 pm also on September 24. Whether you're new to performing or have years of experience, this workshop is a perfect opportunity to explore and grow.

Tickets to the show are \$35; to participate in the pre-show workshop an additional \$10 charge will be applied. To purchase click below, visit www.saintjohntheatrecompany.com or call 506-652-7582.

Support for the SJTC Presentation Series of work is provided by the Government of Canada; the Pannell Family Foundation; the Province of New Brunswick; BMO; and the James Venner Russell Foundation.
